## Abstract

We do cool stuff in linear algebra

## 1 Matrices and linear equations

### 1.1 Elementary definitions and results

Let  $A = [a_{i,j}]$  where  $a_{i,j}$  are the entries of  $A$ . The matrix  $A$  can be explicitly written as:

$$A = \begin{bmatrix} a_{1,1} & a_{1,2} & \dots & a_{1,n} \\ a_{2,1} & a_{2,2} & \dots & a_{2,n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n,1} & a_{n,2} & \dots & a_{n,n} \end{bmatrix}$$

and consider the following system of linear equations:

$$\begin{cases} a_{1,1}x_1 + a_{1,2}x_2 + \dots + a_{1,n}x_n = 0 \\ a_{2,1}x_1 + a_{2,2}x_2 + \dots + a_{2,n}x_n = 0 \\ \vdots \\ a_{n,1}x_1 + a_{n,2}x_2 + \dots + a_{n,n}x_n = 0 \end{cases} \quad (1)$$

**Proposition 1.1.** *The equations in Equation (1) have a unique solution  $\iff A$  is row equivalent to the identity matrix  $I_n$ .*

## 2 Invertible matrices

**Definition 2.1.** *An  $n \times n$  matrix  $B$  is invertible if there is some matrix  $C$  such that  $B \cdot C = I$ , where  $I$  is the identity matrix.*

**Fact 2.2.** *Let  $A$  be an  $n \times n$  matrix. Then the following statements are equivalent:*

1.  $A$  is invertible
2.  $A$  is row equivalent to the identity matrix  $I_n$

### 3 Conclusion

**Theorem 3.1.**  *$A$  is row equivalent to the identity matrix  $I_n \iff$  The equations in 1 have a unique solution.*

*Proof.* The theorem follows from Proposition 1.1 and fact 2.2. □
