

1. Oblicz:

$$(3 + x)^2 =$$

$$(2a - y)^2 =$$

$$(3c + 2e)^2 =$$

$$(5x - 3z)^2 =$$

$$(2x^2 - 3y^3)^2 =$$

$$(x^2 + b^5)^2 =$$

$$(4a^2 - 2b)^2 =$$

$$(5c + 7d^2)^2 =$$

2. Rozłóż na iloczyn czynników:

$$(4 - a^2) =$$

$$(16 - 4b^2) =$$

$$(9a^2 - x^2) =$$

$$(25 - c^2) =$$

$$(36k^2 - 16l^2) =$$

$$(xy - x - y + 1) =$$

$$(4ab - 4a - 4b + 4) =$$

$$(cd - 3c - 4d + 12) =$$

$$(15ef - 3e - 5f + 1) =$$
